

Ideally equipped for wind and weather.

schoeller®-naturetec is the perfect companion for all outdoor activities where freedom of movement and an ideal body temperature are of equal importance. The unique soft-shell combination of soft, natural fibres and functional materials is extremely hard-wearing, pleasantly soft, lightweight and kind to the skin. The fluffy textile made of washable, mulesing-free merino wool from Tasmania combined with durable polyamide and ecorepel® Bio technology keeps the wearer warm naturally.

Properties:

- Combination of nature and function
- Elastic and hard wearing
- mulesing-free merino wool on the inside, durable polyamide on the outside
- Weatherproof- water repelling thanks to ecorepel® Bio
- Comfortable and light
- Easy-care, machine-washable
- High level of breathability
- Bluesign® approved

Areas of use:

Jackets and trousers for outdoor wear, equestrian sports, leisure and casualwear.

Properties Wool:

Sheep are survivors, they can withstand a variety of climatic conditions, supported by their woolen fleece. This is considered as temperature balancing and insulating - both against heat and cold. These positive properties do also show textiles with wool. Merino wool is a renewable textile, merino sheep can be sheared annually. The wool in this schoeller®-naturetec textile was specially treated so that the textile can be washed without any problems at 30 degrees gentle wash in the washing machine. The special feature of this treatment is that the textile is nevertheless bluesign® approved.

Additional function ecorepel® Bio:

ecorepel® Bio imitates plants' natural protection with the aid of a high-performance, permanently odorless high-tech finish. It is PFC-free and is obtained entirely from renewable primary products. The finish envelopes the fibres of the fabric in a thin film, providing the repellent effect which allows water droplets and aqueous dirt to run off the surface.
